“If The Method Works, Why Change It.”

Methodworks acknowledges the growing recognition of the adoption of an Environmental Policy to inform our practises and activities, our approach and consistent focus on improvement and the seeking of more efficient, prosperous and ecologically harmonious methods as part of our commitment to our Collaborators and to our own sustainable business growth.

As a company, we understand the importance of sustainability - in design, delivery and in continuing operation and incorporate the principle of continual improvement in our procedures. For example, this is reflected in how we:

- Source sustainable materials and look for ethical suppliers
- Integrate energy-efficient Design and products where possible while minimising waste.
- Seek to prevent pollution that may arise from any of our direct activities and considering the same in our procedures for our clients.

These methods should therefore be reflected in all of our documentation, our marketing and our communications with our Collaborators, Travellers, the general public and all interested parties.

Effective from 31st July 2013 (unless stated otherwise) the Environmental Policy reiterates how we at Methodworks Production Ltd approach our commitments to the environment. This is not an exhaustive policy and should not be considered as the definitive guide.

1.0 Considerations

- 1.1 We are committed to, as a minimum, meeting legislative requirement, and exceeding the same where possible. We at Methodworks aim to ensure that the business objectives accord with a policy of sustainability for the future, fostering an understanding of environmental issues arising from our business activities amongst our Collaborators, Travellers, suppliers and contractors or anyone else we interact with in order to contribute towards long term economic and social improvement
- 1.2 We have a strong belief that there is an energy which is deep within and around all things that connects life and is based on an idea of creation. The Method is the way of doing, it is the strategy, it is defining the most successful route through whatever course necessary to add the most value and to enhance and benefit all along the journey in reaching the destination to produce a product of outstanding quality and communication with the minimum of impact on the environment, we can learn from the world around us – it has a story to tell.
- 1.3 We appreciate that to be strong you must first be weak and we look upon all of our weaknesses as an opportunity to grow and expand in ways that build a solid and eternal foundation. In our beginning, we seek ways of reaching our creative limits with what we have within our resources – we aim to maintain this commitment – to seek the most efficient, most creative, most beneficial pathway to reach the intended goals of a project without risk to the environment around us.
- 1.4 Few things are more important than great communication - communicating with your employees, customers, clients, shareholders and other interested parties has never been more important and is vital for the success of your business. Over the course of life, many journeys are undertaken, many require a course, and others naturally flow – we intend to ensure that our employees, customers, clients and shareholders all travel on the same journey to reach the same shared goals.
- 1.5 We undertake to review this policy on a regular basis, in the light of new legislation, new codes of practice and any changes in service provision within the company. This review will take place at a maximum of twelve months of the date shown below.

This document is to be reviewed on a yearly basis in July.
